

Nov 23, 2005  
Bible Code Digest  
Mr. Edwin Sherman

Dear Mr Sherman:

I just finished reading your book **“Bible Code Bombshell”**. It was a very interesting read.

Several aspects do remain puzzling. On **Page 22**, **Linda** avers that the passage **“Much Ado About ....”**, contains **200 letters**. Yet to find **“princess”** (Table 1A), page 21, ...at a skip of **84**, means that her program examined **8** letters, ( length of word), times **84** (skip) +, starting at the **4<sup>th</sup>** letter. Such would disclose, that at least... **676 letters** ... were interrogated.

**I do agree** that most passages of any document would give up relevant-appearing words, when **viewed at all possible skips**. Normally, to find clusters, of appreciable lengths, such would require a significant amount of letters. The **(304,805)** letters, of the **Torah**, would be an appropriate candidate, much less, the entire Hebrew Bible, of **(1,196,922)** letters!.

However, certain **Key Codes**, are extracted from a minute amount of letters. One instance is whenever a **Key Code** is located in its entirety, in **(1)** Book of the Bible, or even **(1)** Chapter, therein. ( See **Yacov Rambsel’s** discovery, hereinafter ).

But, in my opinion, while Clusters, defying the laws of chance, are a tremendous portrayal of the probability of **Divine authorship**, that is **NOT** the only way to discover codes in any document. Another way, to search for the existence of codes, is exactly as that, as found in the **COMPUTRONICS PROGRAM**. Choose a subject, create a Grid, then search for strategically-placed, relevant-appearing words, contained therein.

**Note: ALL lines/ words, written in Blue, and encapsulated by quotation marks hereinafter, are direct quotes, of many different sources/people!**

Under the Computronics Program, in the main, any word, with a skip of **(5)** or greater, should **NOT** be considered, of major significance. If it is

truly a **divinely inspired subcode**, then surely the **Creator** would **NOT** have to resort to skips of **8** or **10** , much less, than to skips of **25**, **66** or **84**. **In fact**, a skip of **25**, or greater, is **NOT even** possible, in any of the Matrices, (Hundreds of them ), of all different subjects, I have tested to date.

As for the remark, on page **24**, in which you say, “**Yitzhak Rabin has an over-sized skip of 4,772 between its letters**”, such, is exactly **why** the Bible Code is **ingenious**. To access, **ALL THAT IS, ALL THAT WAS, ALL, THAT EVER WILL BE!**, will probably be requisite for skips, up to an ELS of **299,230**, [for a **(4)** letter word]. Altho, perhaps the average length of a **Key Code**, would be **(8)** letters .

The maximum ELS for an **(8)** Eight-letter Key Code, in the Hebrew Bible would then be an **ELS of 149,615**. Because **NO** matter what the subject is, and **NO** matter what the skip is, in the final analysis, what the **Subcodes** reveal about the **Key Code**, is of **paramount importance**. A **Key Code** skip of **20**, is an **ultra-extreme rarity** , (more about the **Jesus Christ**, **(8-letter)** ELS **20**, later herein ).

As to the interpretation, of the method of his demise, in your book, that **Mr. Rabin** was, “**stoned to death**”, since neither guns nor bullets were invented/available/known, at that time, **consider this interpolation !**

**“STONE(s)” . . . PELLET(s) . . . BULLET(s)**

There are **38 Jesus (Christ) Messiah**, **8-letter** spellings as **Key Code** findings **NOT** including the ELS **20** Code in which **Yocav Rambsel** found the famous, “**Gushing from above, Yeshua was my mighty name and the clouds rejoiced**”, re: ( **R. Edwin Sherman**, author of Bible Code Bombshell, Page 52). But those **38 Jesus Christ** codes, ranged from an **ELS of 45**, to an **ELS 93,477**.

For the purposes of this letter, let us suppose a **Grid** is formed, which is **71 Columns** wide, in an array of **20 Rows**, yielding a total of **1,420 Letters**, ( 355 words ), with which, to **discover relevant words**, (**Subcodes**).

Incidentally, according to my way of thinking, since any **Subcode** was situated in a **contiguous** vertical array (“0” skip), that means that the **ELS of that Subcode, is exactly the same as that of the Key Code**. Therefore, that **Subcode** was **summoned**, to appear in that array, by the **Key Code** itself, (**Jesus Christ ELS 20** )! Are the appearances of any meaningful/relevant **Sub-code**, (Thousands of them), with the same skip as the **Key Code**, **accidental** Subcode disclosures or **Divinely-inspired** ones ?

There are also **(4) 9-letter Spellings of Jesus Christ**, of which **Jesus Christ ELS 5,771** is one. Which of all **42 Jesus Christ Key codes** is the real code? Or are they **ALL** real ? Does it make it less relevant, if the **Key Code** has an ELS of 20, or an ELS of 93,477 ? The **Key Code**, I spent the most time working with, is the **Jesus Christ 9-letter ELS 5,771**. Altho, to date, I have interrogated approximately **15 to 20, Jesus Christ, Key Codes** ( both **8-letter** and **9-letter** spellings ).

The creation of the Matrix, (according to mathematical instructions to create the appropriate Grid), allows identification of any **Key Code**, found X, (skip) letters apart, and the relevant **Subcodes** present, residing in that **Key Code Matrix** .

Needless to say, there are many, many words, in every **Key-Coded Matrix**, which do **NOT** have any relationship, whatsoever, with the **Key Code**. However, in that method, which I have employed, all subject **Key Codes**, peruse the entire **1,196,922** letters, of the Hebrew Bible, to find a subject, [**Key Code**], and thereby construct a Matrix. Then, only the letters **contained in that Matrix**, which was formed, are used to find relevant **Subcodes**, if any!

In the course of my studies, many times, I have... **FAILED**... to find many **3-letter/4-letter Subcodes, which exist, in the Jesus Christ 9-letter, ELS 5771 Key Code**, but **NOT** in the **President Kennedy ELS 3,824 Matrix**.... Likewise, visa-versa,... there are many **3-letter/4-letter** words found in **President Kennedy ELS 3,824**, but **NOT** found in the **Jesus Christ 9-letter ELS 5771**.

Therefore, the often cited complaint by “**nay-sayers**”, that **ANY word**, can

be found in **ANY** document of sufficient length, is **LESS** than accurate. It may be true/maybe **NOT**, but now, that position is certainly **less-reliant**.

Here are a few **examples**: [ I interrupted authoring this document just to find some words, found in the **Jesus Christ**, 5771 Matrix but ... **NOT**... found in the **Kennedy** Matrix.] Remember, **ALL** Key Codes, about **ANY** subject, are formed from **ALL** of the letters of the Hebrew Bible, [which thereby includes the **President Kennedy Matrix**, also]!

Most of the following words were taken from my own computer-stored dictionary, (as defined and propagated, with the help of the Computronics program). For the most part, these are words, (**Subcodes**), that I worked with, in my **Jesus Christ**, 9-letter, ELS 5,771 Matrix.

**NONE**... of these **Subcodes** exceed a skip of (5), and . . . **NONE**. . . of the **Subcodes**, were generally tested for “diagonals with skips”. I feel that Diagonals with skips, “**muddy the waters**”, and very seldom do I accept any of **that** type of **Subcode**. Having said that, I did make (1) exception, to that rule, ( **which hereinafter is disclosed**). **All** words which I deem as relevant, were tested, for forward/backward spelling, including diagonally-formed, forward and reverse spelling, as well with backward/forward, in pertinent skips.

**3-letter words** . . **NOT** . . found in **Kennedy ELS 3,824** Matrix : staff, affliction, spoiled, sowed, split, swift, swore, void. **Total 8**

**4-letter words** . . **NOT** . . found in the **Kennedy ELS 3,824** Matrix : ANGEL, anointing, ascending, beginning, beloved, blessed, covenant, eternity, exalted, firmament, form, GOD, heartily, YESHUA, JESUS CHRIST, kindness, raised, REDEEMER, repentance, RIGHTEOUS, sanctify, spite, spiteful, spoil, spoken, stable, slaughtered, slave, slayer, sleep, swaddling, swine, swore, symbol. **Total 34**

**5-letter words** . . **NOT**. . . found in the **Kennedy ELS 3,824** Matrix : serenity, spoil, split, stable, subject, swore, symbol, **Total 7**

**6-letter words** . . **NOT** . . found in the **Kennedy ELS 3,824** Matrix: Alleluia, Jerusalem **Total 2**

Since I interrogated **88 Subcodes**, which appear in the **Jesus Christ 9-letter ELS 5771 Matrix**, and found that **51 Subcodes** were **NOT** found in the **Kennedy ELS 3,824 Matrix**, such represented approximately **57 %**, **not found/present** in that Matrix. **Note:** Several of the **Subcodes I DID find**, had only **(1) spelling** in the Matrix, and generally . . . **NOT**. . . in contiguous array.

Extrapolating the numbers, alongwith the finding of more than **320 Subcodes**, that I have found [**circa 2000**], in the J.C. **ELS 5,771 Matrix**, then you might find that **182 short-spelling Subcodes**, likewise, would not be found in the **Kennedy ELS 3,824 Matrix**. The point being made here, is that you **CANNOT** calculate events for a **1,420** letter Matrix, **using statistics garnered from interrogation of 304,805 letters**.

Since **1, 420 letters**, is approximately,  $(1/214,^{th} \text{ of } .. 304,805, ( \text{ letters contained in the Torah } )$ , utilizing the table (App 1 G ) found on Page 231, on a **linear basis**, the “**Bombshell**”, would now find **less than 108,000,000** possible combinations of ELS’s, in the **1,420** letter matrix! ? !

The number of given words, that can be made, (table 9 B, Page 192) for a **(4)** letter word is now only **1,091** ( frontward/backward only). To yet be considered, the other dimensions possible for any word to be formed in a Matrix are **NOT** included therein. **Math beyond my capability**.

Hopefully, you may change your way of thinking, ( if , after verifying details of my investigation(s), that indeed short-letter **Subcodes**, which are (discovered/**NOT** discovered), in any particular Matrix, **DO** indeed have validity . Now, if you factor in the positioning of those **Subcodes**, relative to the **Key Code** and/or **each other**, such may lend further credence, for relevance of short- letter, **Subcodes !**

I do . . **NOT**. . agree with most of Drosnin’s work, for far too many reasons than to go into here. However, while Drosnin appeared to foretell the demise of **Mr Rabin**, it was only **after the fact**, that the killer’s was identified (as a name situated, **IN**, and close to the **Key Code**). It was **NOT** possible to pinpoint the killer’s name in advance, because there were/are Hundreds, if **NOT**, Thousands of names, in **ALL** Matrices. **Note : I, have not, interrogated the Rabin Matrix.**

Further, Drosnin's 2nd Book was/is, an utter disgrace, and his lack of religion (**ANY religion**), has shown through, like a beacon.

I **DO agree**, that **clusters of words**, as you are currently advocating, point very realistically to the probability of **Divine authorship**. Case in point, **Yacov's** discovery, ( if his spelling of the **Key Code** is correct ! ). However, that does **NOT** mean that every other method of interrogation is incorrect, and therefore given **NO** weight.

I will say this, that to find relevant-appearing words, in any Matrix, on any particular subject, the resultant, **should be rich** in "0" ELS, skip words (contiguous) They should also be **strategically placed**, also, altho that requirement is not essential, but, it is **highly desirable**.

Subcodes found in any Matrix, with a skip larger than that of **(5)**, may, or **may NOT**, have some relevance. In my studies, I tend to ignore them, **99%** of the time. **That rule is relaxed**, when there is an **unusual placement** of said **Subcode**, and/or, in my opinion, because of **some other compelling circumstance(s)**.

The tables you propounded, on **pages 224 thru 231**, namely app 1A, thru app 1G, were quite impressive, and certainly bore out your case for no apparent meaning, for short letter words,..... **because**.... their appearance could easily be explained as being, the **result of chance**, ( **EXCEPT as hereinafter disclosed** ).

I have written you several times before, in an effort to get you to understand, that indeed many words, appearing in a given Matrix, (or the lack thereof), could have a **special significance(s)** .

The following represents my position, on Matrix-found, short-letter **Sub Codes** : Using the **Computronics**, (2001) program, **ALL 1,196,922 letters** in the **Hebrew Bible** are indeed used, in search of a "Key Code". When a name/ place/thing, (**KeyCode**), is found, then the computer program creates a grid, with the **KeyCode** positioned, in approx the middle/center of the Matrix, in a **vertical contiguous** array.

At that point, those previously mentioned tables of yours, have **NO meaning** because, I would only be interrogating **1,420 Letters**, versus those of the Torah's **304,805** letters, you used to develop those numbers. Needless to say, the letter content, of the entire **Hebrew Bible ( 1,196,922 letters )**, would show even [4 times]?, ... **FAR WORSE !**

Unfortunately, for my position, since your tables show the results of only forward and backward spellings, of any written document, **please be aware**, that in **ANY Grid**, formulated by the Computronics Program, **Subcodes** (words), are **also found** in various **Vertical**, and/or various **diagonal** modes **again**, in **both forward** and **backward modes**, **PLUS skips also**, **again**, in **both directions**.

The highest possible skip for a **4--letter** word in **diagonal** array, in the **71 x 20 Matrix** is **( 18 )**.... [ $A^2$  plus  $B^2$  equals  $C^2$ ], (but only **(17)** in the Horizontal array)!

However, occasionally, an importantly, revealing/strategically-positioned, Subcode, with a skip of higher than **(5)**, is difficult to ignore, as being solely a matter of chance spelling and/or **fortuitous positioning**.

Using the Computronics search engine, in the Jesus Christ ( **9-letter** spelling ), ELS 5771 Matrix, at a **DPI of 1024 X 768**, Zoom 2, bordered by Columns 4200 to Column 4271, and Rows **1 to 20**, ... **( 71 x 20 Matrix )**, I found the following :

**“Mary”**, in a **contiguous diagonal** placement, **shares a letter** with Christ (**Key Code**). Albeit, there are **23 spellings**, of **“Mary”** ( 3-letter word), in all directions, in the aforementioned Matrix. None exceeded a skip of **( 5 )**. There are **(6) contiguous spellings**, **(2)** of which, **share different letters** of the **Key Code**.

**“Trinity”**, in a **contiguous diagonal** placement, **shares a letter** with **“Christ”** (**Key Code**) . There are only **(3)** spellings of **“Trinity”**, including **(2)** in **contiguous** array, in the same matrix. There is one with a skip of **(2)**. The first letter of **Trinity**, **shares a letter**, with the **Key Code**, and **also abuts** the first letter of **Mary**, in/at **Christ**, of the **Key Code**! **Trinity**

abuts, the 2<sup>nd</sup> spelling of **Mary**, also, but on the other side, of the 1<sup>st</sup> spelling of **Mary**

“Ascending”, in a contiguous, diagonal array, shares a letter with the **Key Code**, abuts the 1<sup>st</sup> letter of **Mary**, ( on the other side, which abuts **Trinity**), and is parallel with **Mary**. There are (3) spellings of ascending, (2) of which are **contiguous** and the other with a skip of (1).

“Yahweh”, in a “Diagonal with Steps”, which I generally ignore, and eliminate them in my searches, was found in a skip of (3). I make an exception for this **Yahweh** spelling, because of location. It crosses the **Key Code** , **AND** shares a letter with the **Key Code**, which itself, is already sharing the same letter, with “ascending”.

There are (7) spellings of **Yahweh**, (3) are in Horizontal **contiguity**, (directly from scripture), (2) are in vertical contiguity, therefore deemed by myself as “**summoned**,” by the **Key Code**. None exceed a skip of (3) .

In my opinion, those (4) Subcodes, and the placement thereof, are the most important finds .... ever.... possible, in a Matrix, for small letter subcodes, when researching the subject (Jesus Christ).

Additionally, the Subcode “**Righteous**”, in a contiguous, horizontal placement, shares a letter with **Jesus**, (**Key Code**) and **forms a cross**, atop the **Key Code**. The reason, I attach such great significance to that **Subcode** is, [besides the result of its positioning] is, there is only (1) spelling of “**Righteous**” (of any skip, in any direction), in the Matrix. This finding only **reinforces** the strength of the previous paragraph !

**NOTE:** All searches for **Subcodes** have been carried out in the following skips : (2-letter words, contiguous only), 3-letter word/4-letter word/5-letter word/6-letter word/7, (8), 9-letter Subcode(s), all, up to a skip of 5.

To date, I have found 320 relevant Subcodes, in the **Jesus Christ** (9-letter spelling), ELS 5771 **Matrix**. Naturally, with so many found, relevant **Subcodes**, in such a confined matrix, equally **astonishing conjunctions/ combinations** are present. In fact, some of which, might be considered,

**unavoidable. Planned engineering ?** or “**chance occurrence,**” explanation!  
List available at your request.

Here are some of **my beliefs** that I have regarding **Subcodes**, found in the Matrix in question (as well as any other **Matrix**, containing a **Key Code**).

As hereinbefore indicated, any **Subcode**, found in contiguous vertical array, of any **Key Code**, **MUST** have the same ELS, as the **Key Code**, itself. I therefore always label such, as being “SUMMONED” by the **Key Code**.

The following, is why I disagree even further here with you on the possible finding of related/ relevant **Subcodes**: For any VERTICAL Subcode, my contention is, you have only 21 letters, (5) words, (in each row), to work with, in the formation of, words ( **Subcodes** ), in backward/forward spellings, (plus all skips). Remember, each row consists entirely of a line of scripture, (**VERBATIM**], taken from the BIBLE!, and the words are selected, **ONLY**, from that line, **NOT** Thousands of letters !

Continuing on, the highest possible skip for a **4-letter Subcode**, (vertically) in any single column is **(5)**. That is another part of the reason(s), I chose to limit searches for **Subcodes**, with the limit of skip, based on that maximum of **(5)**.

**Note** : The average length of a word, in the **Hebrew Bible** is, 3.926845 letters, (rounded up to, **(4)** letters).

Any **Subcode(s)**, found in contiguous horizontal array, is also deemed to have been “summoned” by the Key Code, because they are only derived from the Scripture of the Hebrew Bible itself, as hereinbefore disclosed . Each Row is positioned by the Computronics program exactly 5,771 letters away, from the preceding/following Row, starting from, and [determined by, the positioning, of the 1st letter, of the **Key Code**].

Again, in any Horizontally-formed Subcode, it is my contention, that you have only **71 letters** (prox **17** words), to work with, backward/forward/ also including skips, in the formation of any (in any one of the **20** Rows). In the Matrix we have hypothesized herein, each Row of the Matrix, has

itself, been derived from (2) or (3) lines of scripture, exactly as written, in the Hebrew Bible .

When certain small words touch, abut, cross, the **Key Code**, and/or even other related small words, or cluster, around the **Key code**, could these be seen as relevant/informational? I **DO** deem those **Subcodes** prophetic. Perhaps others, believe such happens, solely because of some **law-of-average/chance**, ... **phenomenon ! ? !**

What kind of table, could placement of **Subcode**, possibly be constructed, over and above, the value of a word found, ... be counted, or even, of **NOT** being found ?

More importantly, rather than, to key in **3**-letter words or larger, which were not found, in my studies, (of which, there were far too many), I have concentrated on related **Subcodes**, that .... **were**.... found, in any given Matrix, giving particular note, to those which appear to me to be **meaningfully** relative to other **Subcodes** as well, and/or presented in an **unusual** placement position.

Another case in point, for instance, in a **JFK Key Code**, we see **Kennedy** in contiguous, vertical array. Attached to the top of the **1<sup>st</sup>** letter of the Key Code, again in contiguous vertical array, is the word for **“be killed”**. Since there is **NO** space between the **Key Code** and **Subcode**, I was surprised to find that one spelling of **“Lee”**, (a **2**-letter Hebrew-spelling, with **102** spellings, in that Matrix), **fit nicely in the middle** of **Kennedy** and **killed!** It accomplished fitting in, by using **1** letter of the **Key code (Kennedy)**, and **1** letter of the **Subcode, (Lee)**.

Unfortunately, there are so many spellings of **“Lee”** in that Matrix, I would suppose that the law of averages, might even predict, such a placement, **should** be found in the Matrix, at or near that position. Still, it **IS** an **unusual** placement

In my research, into many different subjects (**Key Codes**), I have been surprised many, many times, **NOT** to find words composed of only **(3)** letters, extremely **contrary**, to those tables, ( pages 224 – 231 of your

book ) **NOT** to mention, that I was also **unable** to find, **far too many**, (4), (5), or 6-letter words (and up ), in any particular, like-sized grid, [up to approx **2700** letters], (in grids I tested so far ).

This is what **leads me to believe**, that those tables, (altho correct for a total Hebrew Bible letter analysis), can **NOT** be applied, when the letters are structured, in a grid form, derived, from just **355** words. Then, those words are morphed into a **1420 letter** Matrix!

Another set of tables, should be structured, using only **X** amount of letters, forward/backward/skips of (0), ( through (20 ), as well as take into account the diagonal possibilities (but excluding diagonal subcodes formed using “steps” ). **Such a construction of relevant tables are beyond my capability.**

As a more important instance, **neither** **Jesus**, (3-letter or 4-letter), “**stand alone**”, **contiguous** spellings, (except as noted herein), can be found in the entire **Hebrew Bible**.

**NOTE:** There **ARE** some (4) letter **stand-alone spellings** of **Jesus** in the last (4) books **ONLY**, but those refer to personages other than ... **Jesus Christ (Messiah)**. Come to think of it .... **why should there be a mention of Jesus Christ**, IN the **HEBREW BIBLE ?** It can be found in many Matrices, but, from letters cadged together! That is another reason for the belief, that the Bible was written under **Divine Guidance!**

**NOTE:** **Jesus Christ** is **NOT** written in the Hebrew Bible **BUT** **Jesus Christ** is spelled out, [in skips], in the Hebrew Bible. ... **Millions of times!**

Earlier herein, I opined that even when **NOT** finding, small-structured **Subcodes**, such might be in fact, significantly important. Having said that despite the fact that **Jesus** (3-letter or 4-letter), **stand-alone spellings** are **NOT** found in the **Hebrew Bible**, thanks to skips, and Matrices, the name “**Jesus**”, **HAS** been found more than **4,706,994 times**, therein. You are also reminded, that **NOT** all of the different ELS spellings, (both 3-letter and 4-letter variety), necessarily reference Jesus, of **Jesus Christ**.

I found those ELS spellings of **Jesus**, (horizontal frontward and backward skips (spellings) ), at the limits of the Computronics program (**skip of 100,000**). Because the highest possible skip for a **4-letter word** in the **Hebrew Bible** is.... **299, 230** ....., and of course higher, for a word with a skip of **(3)**. Obviously there are even more spellings of **Jesus**, situated at those greater skips, not herein included.

I do note, that in the Matrix, (**Yacov's**), shown in page 52 of your book, that along with the depiction in that cluster, it **ALSO** includes some smaller-lettered **Subcodes**. The **Subcodes** shown therein, are all of the low-skip variety, with a generous amount of **(0)** skip ones also, (**which I value the most**). It also shows **MANY** sharing of letters between words, which, again, in my view, ties them more closely together, a **synergistic** effect! There is **NO doubt** that those small Subcodes **bolster/enhance**, the subject! **Evidently, somebody else thought so too!**

To sum up, all contained herein: While the main thrust of search in the **Hebrew Bible**, may be that of searching for clusters, their presentation, in **conjunction with**, smaller letter subcodes, ( in Matrix form ), is infinitely more persuasive of **Divine Origin!** Such, as is powerfully **AND** very eminently displayed in the **Yacov** cluster, that you included and published.

I must say, that I have a very serious problem with the spelling of **Jesus Christ** (8-Letter ), spelling, as in **Yacov Rambsel's** spelling of the **Key Code Jesus Christ** ELS 20. All of the research on **Jesus Christ** (8-Letter spelling), that I have worked with, are **NOT** spelled, as his is. A comparison of my spelling from the Dictionary, [supplied by Computronics], versus **Yacov's** spelling is as follows :

**Mine :**        **Yod/Shin/Vav/Ayin/        /Mem/Shin/Yod/Het**  
**"Yacov :**    **Yod/Shin/Vav/Ayin/        /Shin/ Mem/Yod/Ayin"**

I got the **1<sup>st</sup>** clue something was wrong, when the ELS 20, was **NOT** included in **MY** list of **38 Jesus Christ**, (8-Letter spellings). When I ran another search for **Jesus Christ**, according to **Yacov's spelling**, I found **59 Codes**. The ELS 20 code, **WAS** , indeed found, therein.

Incidentally, the Matrix I generated, using **Yacov's** spelling, was not exactly as portrayed on Page 52. In the main, "**Gushing from above, . . . . etc.**" was intact, but there were differences elsewhere in the Matrix. You may want to take another look .

Now, in your book, you averred that **Yacov** made several errors in spelling. Could this be another? If so, we would lose the "**Gushing**"... **etc.** phrase. **IF ...**the spelling, (provided by the Computronics dictionary), is incorrect, then some of the research I did over the past **(7)** years, was in vain. The **best possible conclusion**, would be that both **8-letter** spellings, indeed are **correct/acceptable !**

I did **NOT** make the mistake, because I pasted in, to my search engine, the spelling directly as the Computronics Dictionary indicated! More importantly, when I checked with them **11-20-05**, they confirmed that my **9-letter**, Jesus Christ, ELS 5,771, in deed, **was correct**.

The Computronic people told me that the Jesus Christ , ELS 5,771 was a translation of the Greek spelling for "**JESUS THE MESSIAH**". I have **NOT** yet heard, about the difference between my **8-letter** spelling and that of **Yacov's**. Perhaps your linguist advisor may help clarify that ! Hoping that both are correct and that there is more than one **(1)** accepted spelling !

Recently, I did a search of a **Key Code supplied by Drosnin**, namely a **(14) letter** Key Code, entitled "**JESUS ENCODED GOD IS TRUTH**", located in Genesis 27:20 and Genesis 40:1. The very first **Subcode**, I tested for, IN THAT matrix , was **Trinity** (a **4-letter** word ).

In the skip search for Trinity, from **(1)** to **(17)**, **(in all directions)**, there were **NONE**, ( not including skips with steps ). I then instituted a search for **Messiah** . I located **(1)**, at a skip of **(4)**. It was in such a subordinate position, that, because of the poor location, together with the "**high**" skip, I determined it, ( and the entire Matrix ), as a useless endeavor !

This backs up your statement, "**that with a large amount of letters (1,196,922) as a base, just about ANY subject MAY be found in ANY document, (including the Hebrew Bible), of sufficient length**".

This also demonstrates the **strength and versatility of the Bible Code** philosophy, that anything, (almost everything?), can be found, It also points out, that Drosnin was more interested in sensationalism, than the **TRUTH!**

**NOTE:** I checked for the following **Subcodes**, and found that **NONE** of the following words appeared in the Matrix :  
Alleluia ( 6 Letters ), 4-letter Subcodes up to a skip of 17, in all directions :  
Abraham; adoration; ashes; beginning; beloved; blessed; blessing; cross;  
exalted; firmament; fruitful; **GOD**; .....etc.

I would **NOT** waste any more of my time, examining the Matrix further. **BUT**, it also points out again, that **NOT** any/every (4) letter word/**Subcode** may be found, in just about any Matrix, [because of the limited amount of letters contained in the Matrix ? or planned engineering]?

I know you are very busy, and I am comfortably retired, but to fairly, and **more importantly**, examine someone else's contrarian thoughts, such, should be at the top of any serious Bible Code devotee's list (which I classify myself). More than likely, many non-Hebrew speakers, as well as those of your readers, do **NOT** want to be left out of the hunt, in the **search for the truth !**

Looking forward, **at your leisure**, to any thoughts relative to your book and/or **my interpretation**, of the finding of small-lettered Subcodes. **OR**, **ANY** other thought(s), or answer(s), you might care to offer.

Best Regards

Carmine Cifaldi
