

Story of the Century 2-8-2010

GLOBAL WARMING IS BENEFICIAL

I hope Global Warming, (whatever the cause), continues ...YET!

To see the **BENEFICIAL** Effects of **GLOBAL WARMING**

See the following:

The **United States**, (as well as the whole world), is attempting to fix a problem, which does ... **NOT**...exist! In the last **(100)** years, the global temperature has increased only **1/4** of **(1)** degree. Let us assume man continues using oil for the next **(100)** years and further assume, Oil and/or coal, **IS** responsible for the said continued temperature increase.

Then even though the temperature might increase another **(3)** degrees, during that period, **oil & coal** resources will have been considerably diminished, if not exhausted. They will certainly be producing a lesser amount! Many of earth's oil wells were already Reporting diminishing output, (in the early **2,000's**)!

Do you want enough water to sustain the earth's inhabitants plus agricultural needs? Earth's population is currently **[2008]**, increasing by over **(62,000,000)** people a year.

In the last **(70)** years, **(1938-2008)**, man's population went from **(3)**Billion people to **(6)** Billion people. Therefore, in the next **(100)** years, [unless there is some mitigating factor(s)], the population will exceed **(16)** Billion people, (plus a commensurate amount of animals) AND taking into account, the additional agricultural needs!

Because **70%**of the earth's **FRESH water** is in storage as ice & snow, in the Antarctica, the small **TEMPORARY** increase(s) of global temperatures, will continue to release additional supplies of water. The prodigious amount of coal remaining, can be cleaned/scrubbed, (with the use of electricity), so that **IT** would **NOT** contribute to any further warming.

Do you want to get rid of **CO₂**? Science has already proven, that can done also! At some point in time, with less **greenhouse gasses** being leased equilibrium would be reached, where **NO** further greenhouse gasses from that source, **COULD** be generated. [if indeed that was the source of Global Warming].

Therefore, there could be **NO** more melting of **ice/snow!** If the temperature rise continues, as **Nature** dictates, then in that case, a **water-distribution system** by man,

will have to be instituted, to keep coastal areas from being flooded. Normally **arid** portions of Earth, could be the recipients of fresh water, as described later herein!

Since **(70%)** of the earth's surface is water, (thru **desalination**), water can be distributed more evenly on earth, (via pipeline). **[For instance]**, pipe water to **Arizona**, or any other area on earth, where **needed/desired!**

Perhaps, we might even create an enormous **fresh-water lake**, in **Death Valley**, (part of the **Mojave Desert**), **California**, which is **(292)** ft **below** sea-level! Because of the tremendous amount of heat in that desert, **evaporation** of water, will also tend to **moderate/lower** the air temperature, as well as returning that water, to the world's **climatic system/network!**

Water from that lake, can also be used for irrigational purposes. (Some of the surrounding areas currently, **[2009]**, are already experiencing a severe lack of water)! Water can be continuously piped in, to make up for evaporation **losses** & agriculture **uses!**

That would provide a **counter-balancing effect**, to all the ice, which has melted into the oceans. Additionally, the **Ice**, (**expanded water**), occupies more water-space, than the water it melts into. That ice-melting, would also tend to lower the level of the oceans, (or at the least, **NOT** add to their rising)!

The last resort for having enough water, in the right places, at the right times, is as follows: Alternative **renewable-energy resources**, **plus atomic fission**, can supply all the electricity civilization needs **FOREVER!**

Eons from then, with an inexhaustible supply of electricity, earth's science, may team the Sun, fresh-water & nutrients, to supplement land-grown food. supplies, as well as create (**synthesize**), all the water earth needs, thereafter!
