Subject: Atomic & Oil Fuels will be exhausted in 150 years or less!

June 4, 2010

Dear Dr. Michael Fox

My research has revealed that in about 150 years (or less), [with certain variables], BOTH Oil and Atomic fuel, (URANIUM), supplies, will be EXHAUSTED!

What do you think the United States/World should do about it?

I believe, stratospheric winds, should be the energy choice resource of the future!
