

MAN HAS NO CONTROL OVER CLIMATE

Over the last **10 years**, (according to the **World Climate Report, Jan 7, 2009**), the earth's temperature, has **cooled slightly**. However, since **1900**, (**100+** years), the earth's temperature **has warmed ONLY**, one quarter (**1/4**) of one degree **F**.

Needless to say, during that same period (**100+** years), at the world's **period of peak modernization/use of oil, Gas and Coal**, coupled with the ever increasing usage of finite-energy resources, man can therefore **only** reasonably be responsible for a maximum increase of **1/4 degree F**.

After another **100 years**, the majority of all those finite resources, [**coal/gas/oil**, the alleged global warming sources], **WILL** be mostly **used up**.

Therefore, after the next **100 years**, even the **alleged** increase of temperature, due to man's Global Warming-effect-materials, will **NO** longer exist! With the ever-increasing use of **renewable energy resources**, (as well as **atomic fission & hopefully atomic fusion**), man's purported contribution to **heating or cooling** of the earth could only be **ZERO!**

AS IT REALLY WAS IN THE FIRST PLACE!

CONCLUSION: If the earth did NOT effectuate a dangerous increase of temperature when we had fossil fuels how will it do it then? The United States is now (2009), going to ruin its economy, fixing a problem which does NOT exist!

For my view on Global Warming, including the oil crisis, klik on the following link!
