

5-16-2009

Dear Len & Reggie Mead:

Hi: This is my latest endeavor to get the world to embrace my educational system!

The U.S.A. is getting **closer and closer** ... to my system, BUT **NOT** fast enough!

I **AM worried** about **China**... They are doing more than any other nation ... with our money yet!

They are **uplifting/transforming** their people from a nation of "**COOLIES**" into a nation of "**EINSTIENS**"! ... **in an alarming world-record time!**

Further, they are making widespread use of erecting **High Voltage Direct Current (HVDC)** lines. One, an **(800)Kilovolt (800,000 volts)** line, will service **(31)** Million people!

NOTE: For your edification, **(HVDC)** is the most **modern/efficient** method to transport electricity. It is far superior to our High Voltage Alternating Current lines, **(HVAC)**, which proliferate in the USA (or any other country in the world), which keeps 1st world nations' economies going!

In my opinion, there are at least **(3) MUSTS**, at a minimum, which are absolutely essential for a nation's well-being.

1. Efficient means of transportation of the masses, **(Roads/Rail/Air, & modern, updated infrastructure** thereto).
2. Superlative educational network (fiber-optic & satellite), facilities and opportunities for the masses. **(TTEC)!**
3. Abundant, cheap, non-polluting, (accessible to all), renewable-energy producers, with excellent distribution capabilities, **(HVDC)**.
