

Oil Crisis

Mr .Al Gore, the 45th Vice President of the United States, 1993-1981, appeared in an Academy-awarded Film, “An Inconvenient Truth”, in 2006, followed by a best-selling book of the same name. He cited the perils earth is facing, primarily because of “Greenhouse Gases”, emitting from the industrializing of the world’s nations, in search for a better life , for their people..

This paper is **NOT** meant to dispute Vice President Gore’s contention, but rather to introduce some little-mentioned facts, data and suppositions., which may impact, or produce other effects, such as, as follows.

According to the U.S. Census Bureau, the “total population of the world (projected Feb. 23, 2008 2:PM EST)”, the date of this writing, is 6, 652, 468, 457. (You can **NEVER** get an exact amount, because the world population increases by a **NET GAIN** of (2) people, every second). Therefore as soon as you write it, the next second, it has changed/increased !

According to “The Harvest Fields” Statistics – 2007 Edition, the world population (in 2006), was increasing by approx 71,000,000 a year, and is constantly accelerating.

REMEMBER, THROUGHOUT THE FOLLOWING DATA: 2 PEOPLE PER SECOND, TRANSLATES TO AN EXTRA 71,000,000 PEOPLE PER YEAR !

Therefore, in the last (10) years, the population was increased by more than (700) million people. In conjunction with that increase, consider the following: Since the normal person’s body temperature is approx (98.6) degrees F, all their functioning bodies give off heat. (Ever been in a crowded enclosure, with **NO** air conditioning)?

Do you want to **house** those people ? The northern regions of the world need heat in their homes. Heat always flows from hot to cold. In their heated homes, heat is always escaping into the atmosphere.. Ever seen houses without storm windows, with ice formed on the windows ? How about roofs on home, with snow on one part and portions adjacent to them, with **NO** snow? Energy-use generated heat is escaping to the atmosphere !

Do you want to feed all those extra people ? Raise extra amounts of animals for food, for those extra people. (Hmmm, the animals give off excess heat also)! Do **NOT** forget to add the flatulence of the animals, to the industry-related gasses, being released into the atmosphere, also.

As the masses increase, the need for more plants and vegetables also necessitate , the use of animal-assisted, mechanized use of equipment, with each contributing their share of heat, (to be released into the atmosphere).

Now, we have recovered the extra agriculture and meat just described, and it must be prepared, processed and shipped somewhere, City/State/Country.

As the standard of living for most people rises, there is a need for more personal transportation for themselves, as well as for equipment operation. (Discount the gasses emitted, because that has already been cited, for release of **GREENHOUSE** gasses). How about the heat, which is released into the atmosphere, responsible for the emission of those gasses ?

Friction created in their normal operation, causes great amounts of heat to be generated, which at some later point will be released in the atmosphere ! Warm climate, or cold climate, there is always (an increasing amount of heat, in an ever-expanding population, an enormous amount of heat released, in the normal operation, of those **EXTRA** vehicles.

Now that we have discussed heat-releasing capabilities of **EXTRA** people/ agriculture, people need one more vital resource to sustain life. There is an urgent need for more water, to supply those recipients.

On the whole, this Ice/Snow from the Polar Caps, is being available as **EXTRA** water in the eco-sphere. At the present time , (**circa 2008**), it is now being returned to the seas, largely **FREE** of salt and minerals.

I remember (**Popular Science** in the **1930s/40s**), hypothesizing/anticipating, that the icebergs melting, (in the future), could be towed into southern ports, as an **ADDITIONAL** source of potable water, for all of earth's needs..

This scenario was developed because the population was ever-growing, faster and faster, thereby **ANTICIPATING** a greater need for fresh, life-giving water.

2 PEOPLE PER SECOND, TRANSLATES TO AN EXTRA 71,000,000 PEOPLE PER YEAR !

WAIT A MINUTE ! There may be an un-thought of reason why all the heat, from the earth-residents, is being released into the atmosphere. In conjunction with the **GREENHOUSE GASSES**, we now know that all that **EXTRA** heat has assisted in causing large parts of our Solar Cap, to melt into the oceans, as hypothesized in this alternate thinking.

SOMETHING TO THINK ABOUT !

Perhaps this **POLAR-STORED**, pure water source , was meant, by **MOTHER NATURE**, to supply **EXTRA** water, for all the **EXTRA** people on earth, for eons, yet to come.

In the meantime, back to where Man, might be able to help himself, stretch out the **FINITE** oil supplies. This is a much more pressing problem than greenhouse gasses. **NO** oil-supplied energy, then absolutely **NO** Greenhouse gasses to be released !

In **1983**, as **Chairman of the Passaic County (N.J.) Energy Commission**, I suggested, to certain high government, elected officials, my view as to the **EASING** of the emerging energy dilemma. I actually developed my theory, relative thereto, in **1980**. See **Pages 86–89**, in © **1978 The Ideal Educational System/Two Teachers in Every Classroom**, printed **Feb 2008**, and also see the following except:.

Excerpt from my Pedigree:

1983 Appointed Chairman of Passaic County, N.J. Energy Commission. Served for (6) months, then resigned. I notified the Carter Administration (& every Presidents' administrations thereafter), of what I would do to ease, if not solve the Energy problems facing the U.S. See official calling card on www.cifaldi.org .
{Still valid Information available Feb 25, 2008}

My theory presented, **IN PERSON**, to the **(3)** highest officials in State Government, was as follows:

1. Let all **3** branches of Government, **lead by example**. Starting with the **Federal Government**, followed by the **State Government**, (in this case, I wanted the **State** to start first), and finally the **Local Government**, equip **ALL** governmental buildings, with at least **(2)** forms, of renewable-energy recovery systems.
2. As the **energy-use costs, start to decline**, in those buildings, (**despite rising oil costs !**), offer the value of money saved, to ordinary citizens, as **tax credits**, so that they themselves can share the installation costs to their own buildings. Those owned by **PRIVATELY-OWNED** entities and/or business organizations, should also be encouraged/rewarded.
3. A meaningful outgrowth of increased production of renewable- energy equipment, leads to what they say in business , as **"ECONOMIES OF SCALE"**. The

MORE units produced, the **LESS** the cost for each one. (because there are certain costs which are **FIXED** ...no matter how many units produced).

4. Coupling this advantage, with **TAX CREDITS FROM** the Government, for the individual home-owner, produces a **BENEFICIAL SNOW-BALLING** effect. While this alone, will **NOT SOLVE** the energy crisis, (because oil is a finite resource), it would be coupled with the increased use of **atomic-energy-produced electricity**. This should give us enough time, (a couple of hundred years), to perfect the ultimate energy source, **hydrogen**, (derived from the oceans (water).

5. A way will be found to harness **FUSION** power, (as practiced by the **SUN**), which uses **hydrogen** as a fuel. This method would be found, and used, similar to that, which harnessed the **FISSION** of the atom, (**SPLITTING** of the atom), commonly known as “**atomic energy**”). Advancing technology, should also be able to create **LESS** energy-consuming equipment/devices

6. To date, **Feb. 2008**, the federal government has **gifted Hundreds of Billion of Dollars**, to the richest companies in the world, in the hope that they would come up with, a “**magic bullet**”. Many Colleges and Universities/ gifted individuals, (who were also rightly recipients), also received those types of funds !

I really **HATE** to say what is written in the next paragraph, **BUT IT MUST BE SAID!**

Had my advice been **followed** and **implemented** starting in the **1980's**, prices of oil would surely be **LOWER** than they are now. The cost of living/related costs would be far **LESS** than they are now. **Hundreds of Billions of dollars** of taxes, paid by the poor and middle class people, as well as industry, would **NOT** have been necessary. Our standard of living would be far above, what it is today (**Feb 18, 2008**)

Feb 25, 2008 **Proof** of the validity of my vision, for renewable energy/**energy-demand-lowering systems** initiatives, in **1981**, in which Governments should “**LEAD BY EXAMPLE**”, has actually, recently, been taken by, **LOCAL/ CITY Governments**.

This has been **documented**, as nicely **demonstrated** in the **Popular Science, March 2008, Volume 272 #3, Pages 51-59**, entitled the **50 GREENEST CITIES**, (in the U.S.).

Whoever reads this: **YOU CONTACT** your Congressmen/Senators/Governors/ Government Officials, to urge them to **SET AN EXAMPLE ... BY LEADING**

THE WAY, (LEAD BY EXAMPLE) TO ENERGY-RELIEF, WHICH LEADS TO LOWER TAXES AS INDICATED HEREIN.

See www.cifaldi.org Look in **Files** and select © 1978 **The Ideal Educational System/Two Teachers in Every Classroom** or see the book of that name, Pages **87 to 89**, published **Feb 19, 2008**.

DO WE HAVE TO WAIT ANOTHER 30 YEARS, FOR YET ANOTHER WAKE/UP CALL ? ! ?

Sincerely offered
Carmin Cifaldi
