

Dear Mr. Michael Tennesen:

April 21, 2010

I enjoyed, very much, reading your article "**Turning to Dust**", in Discover Magazine, May 2010, Pages 67-72!

In 2008, I wrote an article about Global Warming, inextricably tied into the Oil Crises, which may also be tied into Earth's spectacular control, over one of man's most valuable assets WATER!

I once served as, **Chairman** of the **Passaic County (N.J.) Energy Commission**. There is more information about me, (than you will ever need), in many Search Engines, including **Bing**, **Clusty**, **Google**, **Yahoo**, and many more!

Attached hereto and a part of hereof, are my thoughts, observations, and conclusions to the problem, which **does NOT exist**: namely, man's effort to **control/legislate**, climate, Global Warming, *whatever the cause!*

Since this E Mail is unsolicited, should it displease you in any way, kindly **delete** same. I thank you for the time you spent reading this. Following are several letters I authored, relative to the subjects:

Dear **Mr. Fred Guterl**, **Discover Magazine Assistant Managing Editor: 4-13-2010**
Re: Your interview **April, 2010** of Michael Mann & Judith Curry

The problem in dealing with experts is, that they are only interested in suppositions, extrapolations, facts, which support their point of view. They tend to ignore same, which point to an opposing view!

Attached hereto, please find information, relative to **Global Warming**, I have developed, (over many years), ... **based on facts**, such as:

1. In a **70** year period, the world population ending in **2008**, has **doubled** to **(6)** Billion!
2. There were between **(4)** to **(7)** periods, (depending on source), **glaciations**, (and **thaws**), before the advent of man, certainly **BEFORE** the **Industrial Revolution!**
3. Mankind et al, **can NOT live**, without water.
4. **70 %** of the Earth's **FRESH WATER**, is saved, (as **ice & snow**), in the **Antarctica!**
5. At the present, (**regardless of cause**), much of that **ice & snow**, is being converted to water, and re-introduced into the earth's climatic system.
6. **71 %** of the Earth is composed of water!

7. **Oil**, (a **finite resource**), is now coming closer, (faster & faster), to depletion.

8. **Atomic Energy**, [*powered by Uranium*], (a **finite resource**), will share the same fate, at about the same time (**150 +/- years**)! (I have **NEVER** heard one single energy entity/scientist/person, recognize that **FACT!**)

9. Wind, (a renewable-energy-resource), will be here forever! It has advantages and disadvantages, but the good ones, outweigh the bad ones. The most valuable aspect of the wind is, that it takes advantage of the **“Double-Quadruple Principle”!**

Another valuable asset is, that in the stratosphere, wind-velocities are steady, and wind-speeds, may be as high as **200 miles per hour!**

See link, next

10 Unless a way can be found, to utilize hydrogen, (**Nuclear Fusion**), or some other use of Hydrogen, as a primary energy-source..... then in that case, wind-energy-recoveryis the best power source for the future..... on earth, (as at this writing)!

Yours truly,

Carmine Cifaldi
