

## **VERY IMPORTANT!**

Do **NOT** let the politicians destroy the World's economy!

To see the **beneficial effects** of **Global Warming!**

**See the following:**

### **Beneficial Global Warming**

**EMERGENCY:** The **United States**, (as well as the whole world), **is attempting to fix a problem, which does NOT exist!**

Over the last **100 years**, the global temperature has **increased 1/4 of 1 degree**.

Let us assume man continues using oil for the next **100 years** and further assume it is responsible for said continued temperature increase.

Then even though the temperature might increase another **3 degrees**, during that period, **oil** resources will have been considerably diminished, **if not exhausted**. They will certainly be producing a lesser amount! Many of earth's oil wells were **already** reporting diminishing output, (in the early **2,000's**)!

Do you want enough water to sustain the earth's inhabitants plus agricultural needs?

**Earth's** population is increasing by over (**62,000,000**) people a year. In the last (**70**) years, (**2008**), man's population went from (**3**) **Billion** to (**6**) **Billion**. Therefore, in the next (**100**) years, (at that rate), the population will exceed (**16**) **Billion** people, (plus a commensurate amount of animals) **AND** the additional agricultural needs!

Because **70%** of the **earth's FRESH** water is in storage as **ice & snow**, the modest **TEMPORARY** increase of global temperatures, will continue to release additional supplies of water. Even the prodigious amount of coal remaining, can be cleaned/scrubbed, (with the use of electricity), so that **IT** would **NOT contribute** to any further warming.

Do you want to get rid of **CO2**?... Science has already proven, that can be done also!

At some point in time, with **less** greenhouse gasses being released, **equilibrium** would be reached, where **NO** further greenhouse gasses are generated. Therefore, there will be **NO** more melting of **ice/snow**!

At that point, & for millennia thereafter, (since **71%** of the earth's surface is water), through **desalination**, water can be **distributed** more evenly on earth, (via pipeline). (For instance), pipe water to **Arizona**, or any other area on earth, where **needed/desired**! That will also tend to **lower the level of the ocean!**

Finally, with the use of electricity, the oceans of the world, (71% of the earth's surface), are also available for man's use in the following ways: Desalinate the water and via pipeline, send the water to where it is needed, (a) for irrigation, in various areas/regions (B) to create large FRESH WATER lakes/reservoirs, (for a multiplicity of uses, as needs/desires.

For instance, creating large lakes, (as in Death Valley, California), [which is (292)] feet below sea level), may apply to ALL desert-like, or low-lying areas, in other parts of the world! The fresh-water will help turn marginal plant-growing areas into more fertile land, as well as being available to irrigate crops, in normally dry weather/seasons!

Because of evaporation, the air above the water will become more moist & cooler. Moving the water from the oceans to other low-lying areas of earth would tend to moderate the height of the oceans, as well as the Ice melting.

The last resort for having enough water, in the right places, at the right times, is as follows: Alternative renewable resources, plus atomic fission, can supply all the electricity civilization needs FOREVER! With an inexhaustible supply of electricity, earth's science, may make, (synthesize), all the water earth needs, thereafter!

For the rationale, (and more detail), behind these statements, go to the following link: <http://www.cifaldi.org/files/Global%20Warming%20&%20Oil%20Crises%2011-22-2008.pdf> or, as the case may be.... Go to: [www.cifaldi.org](http://www.cifaldi.org).... Click on FILES.... click on Global Warming
