

**Webcam Catches Burglars** ... (April 2009), in the act ... and Police catch them ... **PLUS (2)** others, in another home on the same street, .... (courtesy of one of the stars, of **that** Web-cam).

See the following link:

[http://www.informationweek.com/blog/main/archives/2009/04/webcam\\_captures.html](http://www.informationweek.com/blog/main/archives/2009/04/webcam_captures.html)

In **1978**, I envisioned that the **TTEC** technology, (among many other benefits), could guard the interior premises of any edifice, where the system is properly installed, (even providing for a total darkness, [**infra-red**], situation).

In **1997** I constructed a **mini-Internet**, in my **6400** sq ft, (**9**) office suite. There, I demonstrated a **working** system to a newspaper reporter! For that demonstration, I had a woman "**signing**" (so the hearing-challenged people watching the video, could see (and "**HEAR**" ), what the system was all about!

This mini-internet, included provisions for many uses, such as this one, watching the inside of your home ...while you were in another place, ... down the street, ... across the U.S. in California ... or even from Europe !

Basically, as you walked into any one of the (**9**) offices, it started a video camera, in each, **OR**, every office, (as the case may be). The video camera continued recording, as long as there was motion detected/continued.

The camera shut down, whenever **NO** motion was detected for (**10**) seconds. It would start again, as soon as any motion was detected again, regardless from whichever office, the motion was detected. Any/all Video/audio information, (including any, which was **infra-red** captured), was recorded, on an 8 hr tape!

See the actual Newspaper report!
